

SALESFORCE ADMIN FUNDAMENTALS

COACHING CENTRE SOLUTION

Student Build Manual

Five days. One continuous reference. Every click, value and checkpoint in working order.

- 01** Create Courses
- 02** Enroll Students
- 03** Control Access
- 04** Automate Enrollment
- 05** Report and Demonstrate

HOW TO USE THIS MANUAL

Keep this PDF open beside Salesforce. Work within the correct Day and Topic. The numbered procedure continues across pages, so students can use the page number and topic header to resume their own place.

Bold text	A Salesforce object, field, record, tab, button or setting that you need to find or use.
<i>Italic text</i>	The actual value that you need to type or choose.
<i>Bold italic text</i>	A named record or saved item that you create and then use again later.
YOU SHOULD SEE	The result to check before continuing.
TIP OR RECOVERY	What to do when the expected screen or result is missing.

BEFORE YOU BEGIN

Use Salesforce Lightning in English on a laptop or desktop. Keep the same class org for all five days. Keep a notebook for usernames, dates and saved ENR numbers. If your screen differs from the guide, keep the message visible and show your trainer before creating duplicate objects or records.

CONTENTS

DAY 1: CREATE COURSES	5
DAY 1, TOPIC 1: Prepare your practice org	6
DAY 1, TOPIC 2: Create the Course object	10

DAY 5, TOPIC 6: Build the dashboard and both charts	88

DAY 5, TOPIC 7: Correct report or dashboard totals	91
DAY 5, TOPIC 8: Prepare and deliver the demonstration	92

DAY 1: CREATE COURSES

Starting point: A new Developer Edition org.

Goal: Create a place to store the courses the institute teaches.

Finish with: A Courses tab and two named Course records.

WHAT WE ARE COVERING

Org Your practice Salesforce environment. Use the same org throughout the five-day exercise.	App A set of Salesforce tabs and tools arranged for a particular type of work.
Custom object A container you create to store one kind of business information. Here, it stores Courses.	Record One saved item inside an object, such as the Course named Salesforce Admin Fundamentals.
Tab A navigation item that opens the records belonging to an object.	

TOPICS IN THIS DAY

01 Prepare your practice org Sign in to the correct practice org and keep the Sales and Setup workspaces ready.	02 Create the Course object Create the custom object that stores the coaching centre's Course records.
03 Add and show the Courses tab Make the custom object available from the Sales navigation bar.	04 Create the two Course records Add the two starting Course records used during the rest of the exercise.

DAY 1, TOPIC 1: Prepare your practice org

Sign in to the correct practice org and keep the Sales and Setup workspaces ready.

WORKSPACE: BEFORE YOU START • BROWSER • SIGNUP • SYSTEM ADMIN • SALESFORCE

Follow One Screen At A Time

- 01** Use Salesforce Lightning in English on a laptop or desktop. Keep this guide open beside Salesforce.
- 02** Read the Day and Topic heading at the top of the page. Complete the numbered steps in order.
- 03** Type the values after “enter” exactly. Do not type the quotation marks around sample text.
- 04** Compare your screen with YOU SHOULD SEE before moving to the **next** step.

YOU SHOULD SEE

You know where you are, what to do **next** and how to check your work.

TIP OR RECOVERY

If your screen differs, keep it open and show your trainer. Do not guess or **create** duplicate objects.

- 05** Keep a notebook for your org address, **username**, **course** dates and practice record numbers.
- 06** An org is your practice Salesforce environment. Use the same class org on all five days.
- 07** A checkbox with a tick is selected. Click it once only when you need to change its state.
- 08** Leave settings not mentioned in an instruction unchanged. Scroll down if a named button is not visible.

YOU SHOULD SEE

You are ready to use the guide with your class practice org.

TIP OR RECOVERY

Only the sample names are fixed. Use your own working **email** and unique usernames.

Create Your Practice Account

09	If your class org already exists, sign in and go to “Open Sales and Setup ” [Day 1, Topic 1: Prepare your practice org].
10	For a new org, click the browser address bar. Enter <i>developer.salesforce.com/signup</i> .
11	Press Enter. Wait for the Developer Edition signup form to load.
12	Click First Name and enter <i>your first name</i> . Click Last Name and enter <i>your last name</i> .

YOU SHOULD SEE

Your own name appears on the Developer Edition form.

13	Click Email . Enter <i>an email address whose inbox you can open now</i> .
14	Open the Role drop-down. Select Student , or Developer if Student is unavailable.
15	Click Company . Enter <i>JIET Jodhpur</i> .
16	Open Country/Region . Select <i>India</i> . Click Postal Code and enter <i>342005</i> , if requested.

YOU SHOULD SEE

Your name, working **email** and institute **details** are entered.

17	Click Username . Enter <i>a unique value in email format, such as yourname.jiet.2026@example.com</i> .
18	Record the exact username . It does not need to be a working mailbox; the Email field does.
19	Read and select the required agreement checkbox. Complete any verification challenge shown.
20	Click Sign me up or the signup button. If the username is taken, change it and submit again.

YOU SHOULD SEE

The page tells you to check your **email**.

TIP OR RECOVERY

The example **username** is a pattern. Replace it with your own unique value.

- 21** Open your **email** in another browser tab. Find the Salesforce account activation message.
- 22** Open the message and click Verify Account or its activation link. Check Spam if it is missing.
- 23** On the password page, enter and confirm a password that meets the displayed requirements.
- 24** Complete the security question or verification prompts shown. Click Change Password or **Save**.

YOU SHOULD SEE

Salesforce opens in your **new** practice org.

TIP OR RECOVERY

If signup or verification fails, show the exact message to your trainer before continuing.

Open Sales And Setup

- 25** Click your avatar at the top right. Check that the displayed name is yours, then close the menu.
- 26** Click **App Launcher**, the nine-dot icon at the top left.
- 27** Click its search box. Enter *Sales*.
- 28** Click the **Sales** app result. Wait for the **Sales** navigation bar to appear.

YOU SHOULD SEE

You are in the **Sales** app, where you will **create** practice records.

- 29** Find **Contacts** in the top navigation bar. Click it. If hidden, open the More menu first.
- 30** Notice the list of **Contact** records. We will use **Contacts** for our students.

- 31 Click the gear icon at the top right of Salesforce.
- 32 Click **Setup** in the menu. Salesforce opens **Setup**, usually in another browser tab.

YOU SHOULD SEE

You have **Sales** for records and **Setup** for configuration.

TIP OR RECOVERY

“Coaching Institute Manager” is the exercise name. This guide builds its objects inside the **Sales** app.

- 33 In **Setup**, click **Object Manager** near the top of the page.
- 34 Look at the object list. Use its own Quick Find box when searching for an object.
- 35 Click the **Sales** browser tab to return to your records.
- 36 Click the **Setup** browser tab again. Keep both browser tabs open throughout the lab.

YOU SHOULD SEE

You can switch between the **Sales** and **Setup** workspaces.

TIP OR RECOVERY

Setup Quick Find at the left searches settings. **Object Manager** Quick Find searches objects.

DAY 1, TOPIC 2: Create the Course object

Create the custom object that stores the coaching centre's Course records.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • NEW CUSTOM OBJECT

Create The Course Object

01 Click the **Setup** browser tab. Click **Object Manager** near the top.

02 Click **Create** at the top right of **Object Manager**.

03 Click Custom Object in the menu.

04 Click Label and enter **Course**. Click Plural Label and enter **Courses**.

YOU SHOULD SEE

The **New** Custom Object form contains **Course** and **Courses**.

05 Click outside the label field. Leave the automatically filled Object Name as **Course**.

06 Click **Description**. Enter *A course offered at the coaching institute*.

07 Scroll to Record Name. Enter **Course Name**.

08 Open the Data Type drop-down beside Record Name. Select Text. Keep this form open.

YOU SHOULD SEE

Each **Course** record will have a **Course Name** that you type.

TIP OR RECOVERY

If **Course** already appears in **Object Manager**, open that object instead of making another.

Save The Course Object

09 Scroll to Optional Features. Select *Allow Reports*.

10 Select *Allow Activities*.

11 Select *Track Field History*.

12 Find Deployment **Status**. Keep *Deployed* selected.

YOU SHOULD SEE

The **Course** object has the requested features and is *deployed*.

- | | |
|-----------|--|
| 13 | Scroll to Search Status . Select <i>Allow Search</i> . |
| 14 | Scroll to Object Creation Options. Select Launch New Custom Tab Wizard after saving this custom object. |
| 15 | Leave other settings unchanged. Click Save once at the bottom. |
| 16 | Wait for the New Custom Object Tab wizard. Do not create a Course record yet. |

YOU SHOULD SEE

The tab wizard opens with Object = **Course**.

TIP OR RECOVERY

If the wizard does not open, follow “Open a missing tab wizard” [Day 1, Topic 3: Add and show the **Courses** tab] before adding the **Courses** tab.

DAY 1, TOPIC 3: Add and show the Courses tab

Make the custom object available from the Sales navigation bar.

WORKSPACE: SYSTEM ADMIN • SETUP • ONLY IF NEEDED • SYSTEM ADMIN • COURSE TAB WIZARD • SYSTEM ADMIN • SALES

Open A Missing Tab Wizard

- 01** If the **Course** tab wizard is already open, skip this recovery subsection and go to “Add the **Courses** tab” [Day 1, Topic 3: Add and show the **Courses** tab].
- 02** Otherwise, click **Setup**. In the left Quick Find box, enter *Tabs*.
- 03** Click **Tabs** in the matching results. Find the Custom Object Tabs section.
- 04** If **Courses** is absent, click **New** in that section. Select **Course** in the Object drop-down.

YOU SHOULD SEE

The **Course** tab wizard is open, or **Courses** is already listed as a custom tab.

TIP OR RECOVERY

If **Courses** already exists, skip the wizard instructions and go to “Show **Courses** in **Sales**” [Day 1, Topic 3: Add and show the **Courses** tab].

Add The Courses Tab

- 05** Confirm Object = **Course**. Click the Tab Style lookup icon or style box.
- 06** In the style window, click one icon/color. The choice does not affect this exercise.
- 07** Click **Next** at the bottom of the tab wizard.
- 08** On the **profile** screen, keep Apply one tab visibility to all profiles and *Default On*.

YOU SHOULD SEE

The **profile** visibility screen is ready to continue.

- 09** Click **Next** on the **profile** visibility screen.
- 10** On the custom apps screen, find **Sales**. Keep its checkbox selected; select it if it is clear.

- 11 Leave other app selections unchanged. Click **Save**.
- 12 Click the **Sales** browser tab. Use the browser Reload button to **refresh** it.

YOU SHOULD SEE

The **Courses** tab has been created and made available in **Sales**.

Show Courses In Sales

- 13 Look for **Courses** on the navigation bar. Check the More menu if the bar is full.
- 14 If **Courses** is visible, click it and go to “Add your first **Course**” [Day 1, Topic 4: **Create** the two **Course** records].
- 15 If it is absent, click the pencil at the far right of the **Sales** navigation bar.
- 16 In **Edit Sales** App Navigation Items, click Add More Items.

YOU SHOULD SEE

The Add Items window is open if the **Courses** tab was missing.

- 17 Select All in the item list, if shown. Click the search box and enter **Courses**.
- 18 Select **Courses** using its plus or checkbox.
- 19 Click Add 1 Nav Item or Add. Then click **Save** in the navigation editor.
- 20 Click **Courses** on the **Sales** navigation bar.

YOU SHOULD SEE

The **Courses** list opens.

TIP OR RECOVERY

If **Courses** is absent from Add Items, return to the tab-wizard recovery subsection.

DAY 1, TOPIC 4: Create the two Course records

Add the two starting Course records used during the rest of the exercise.

WORKSPACE: SYSTEM ADMIN • SALES • COURSES

Add Your First Course

- 01 Click **Courses** in the **Sales** navigation bar.
- 02 Click **New** at the top right of the **Courses** list.
- 03 Click **Course Name**. Enter *Salesforce Admin Fundamentals*.
- 04 Click **Save** once at the bottom of the form.

YOU SHOULD SEE

A **Course** record opens with the exact name *Salesforce Admin Fundamentals*.

TIP OR RECOVERY

An object is the container. This named **Course** is one record inside it.

Add Your Second Course

- 05 Click **Courses** in the navigation bar to return to the list.
- 06 Click **New**. Click **Course Name** and enter *Data Analytics 101*.
- 07 Click **Save** once. Then click **Courses** to return to the list.
- 08 Click the list-view arrow beside Recently Viewed. Select All **Courses**.

YOU SHOULD SEE

Both named **Course** records are visible. Day 1 is complete.

TIP OR RECOVERY

If a name is wrong: open the record, click **Edit**, correct **Course Name**, then click **Save**.

DAY 2: ENROLL STUDENTS

Starting point: Your Course object and two Course records from Day 1.

Goal: Connect each enrollment to a student and a course.

Finish with: Two enrollments; the Course totals 2 and 30,000.

WHAT WE ARE COVERING

Field One piece of information stored on a record, such as Fee or Start Date.	Contact Salesforce's standard object for a person. In this exercise, Contacts represent students.
Lookup relationship A flexible link to another record. Enrollment uses a lookup to identify its Student.	Master-detail relationship A strong parent-child link. Every Enrollment must belong to a Course.
Roll-up summary A field on the parent Course that counts or totals information from its Enrollments.	Enrollment A custom record joining one student to one Course and storing the Amount Paid.

TOPICS IN THIS DAY

01 Add the Course fields Add the fields required to describe, price and schedule each Course.	02 Complete the Course records Enter the full details for both Course records.
03 Create the Enrollment object and tab Create the child object that stores one student joining one Course.	04 Add the Student relationship and Contacts Create student Contacts and connect Enrollment to Contact through a lookup.
05 Link Enrollment to Course and payment Require every Enrollment to belong to a Course and store the payment received.	06 Add Course totals Count child Enrollments and total their Amount Paid values on the parent Course.
07 Enroll students and verify the totals Create the real exercise Enrollments and confirm the Course totals.	

DAY 2, TOPIC 1: Add the Course fields

Add the fields required to describe, price and schedule each Course.

WORKSPACE: SYSTEM ADMIN • SALES • SYSTEM ADMIN • SETUP • SYSTEM ADMIN • SETUP • COURSE

Start Day 2 In Your Org

- 01 Sign in to the same class org. Click your avatar and confirm your System Admin name.
- 02 Click **App Launcher**, search **Sales** and click the **Sales** app.
- 03 Click **Courses**. Open the list-view arrow and select All **Courses**.
- 04 Confirm *Salesforce Admin Fundamentals* and *Data Analytics 101* are present.

YOU SHOULD SEE

Your two Day 1 **Course** records are ready.

TIP OR RECOVERY

If they are missing, check the **username** and org address from your notebook before creating anything.

Add The Description Field

- 05 Click the gear icon at the top right. Click **Setup**.
- 06 Click **Object Manager**. Click its Quick Find box and enter **Course**.
- 07 Click **Course** in the object results. Click **Fields & Relationships** in its left menu.
- 08 Click **New** above the field list.

YOU SHOULD SEE

The **New** Custom Field wizard is open on **Course**.

- 09 Select the radio button beside *Text Area (Long)*. Click **Next**.
- 10 Click Field Label. Enter **Description**. Leave the generated Field Name unchanged.
- 11 Click Length and enter *1000*.

- 12** Click Visible Lines and enter 3. Leave Help Text and the other options unchanged.

YOU SHOULD SEE

The field **details** are filled. Continue to field access and layout.

- 13** Click **Next** at the bottom of the field **details** page.
- 14** On Establish **field-level security**, keep the preselected **profile** visibility settings. Click **Next**.
- 15** On Add to page layouts, keep **Course** Layout selected.
- 16** Click **Save**. Look for the **new** field in **Fields & Relationships**.

YOU SHOULD SEE

The **new** field is saved on **Course**.

TIP OR RECOVERY

If you see a red error, read it and correct that field. Do not click Back or **create** a duplicate field.

Add The Status Field

- 17** Click **Object Manager**. Search for **Course** and click **Course**.
- 18** Click **Fields & Relationships**. Click **New**.
- 19** Select *Picklist*. Click **Next**.
- 20** Click Field Label and enter **Status**.

YOU SHOULD SEE

The *picklist* field is named **Status**.

- 21** Select Enter values, with each value separated by a **new** line.
- 22** Click the values box. Type *Planned*, press Enter, type Live, press Enter, then type *Completed*.
- 23** Select Use first value as default value. Leave the generated Field Name as **Status**.
- 24** Keep the other settings unchanged. Click **Next**.

YOU SHOULD SEE

There are exactly three values; *Planned* is the default.

- 25** On Establish **field-level security**, retain the selected visibility settings.
- 26** Click **Next**. On Add to page layouts, keep **Course** Layout selected.
- 27** Click **Save**. Wait for **Fields & Relationships** to reappear.
- 28** Confirm **Status** is listed as a *Picklist* field.

YOU SHOULD SEE

The **Status** field is saved on **Course**.

Add The Fee Field

- 29** Click the gear icon at the top right. Click **Setup**.
- 30** Click **Object Manager**. Click its Quick Find box and enter **Course**.
- 31** Click **Course** in the object results. Click **Fields & Relationships** in its left menu.
- 32** Click **New** above the field list.

YOU SHOULD SEE

The **New** Custom Field wizard is open on **Course**.

- 33** Select the radio button beside *Currency*. Click **Next**.
- 34** Click Field Label and enter **Fee**. Leave Field Name as **Fee**.
- 35** Click Length and enter *16*. Click Decimal Places and enter *2*.
- 36** Leave Required unselected and Default Value empty.

YOU SHOULD SEE

The field **details** are filled. Continue to field access and layout.

- 37** Click **Next** at the bottom of the field **details** page.
- 38** On Establish **field-level security**, keep the preselected **profile** visibility settings. Click **Next**.

- 39** On Add to page layouts, keep **Course** Layout selected.
- 40** Click **Save**. Look for the **new** field in **Fields & Relationships**.

YOU SHOULD SEE

The **new** field is saved on **Course**.

TIP OR RECOVERY

If you see a red error, read it and correct that field. Do not click Back or **create** a duplicate field.

Add The Start Date Field

- 41** Click the gear icon at the top right. Click **Setup**.
- 42** Click **Object Manager**. Click its Quick Find box and enter **Course**.
- 43** Click **Course** in the object results. Click **Fields & Relationships** in its left menu.
- 44** Click **New** above the field list.

YOU SHOULD SEE

The **New** Custom Field wizard is open on **Course**.

- 45** Select the radio button beside Date. Click **Next**.
- 46** Click Field Label and enter **Start Date**.
- 47** Click outside the label. Leave Field Name as Start_Date.
- 48** Leave Required unselected and Default Value empty.

YOU SHOULD SEE

The field **details** are filled. Continue to field access and layout.

- 49** Click **Next** at the bottom of the field **details** page.
- 50** On Establish **field-level security**, keep the preselected **profile** visibility settings. Click **Next**.
- 51** On Add to page layouts, keep **Course** Layout selected.
- 52** Click **Save**. Look for the **new** field in **Fields & Relationships**.

YOU SHOULD SEE

The **new** field is saved on **Course**.

TIP OR RECOVERY

If you see a red error, read it and correct that field. Do not click Back or **create** a duplicate field.

DAY 2, TOPIC 2: Complete the Course records

Enter the full details for both Course records.

WORKSPACE: SYSTEM ADMIN • SALES

Complete The Admin Course

- 01 Click the **Sales** browser tab. Click **Courses** in its navigation bar.
- 02 Open the list-view arrow and select All **Courses**.
- 03 Click *Salesforce Admin Fundamentals*.
- 04 Click **Edit** in the record header. If it is hidden, open the header action drop-down.

YOU SHOULD SEE

The **Edit** form for *Salesforce Admin Fundamentals* is open.

- 05 Click **Description**. Enter *5-day admin bootcamp for graduation students*.
- 06 Open **Status** and select *Planned*.
- 07 Click **Fee**. Enter *15000* without a *currency* symbol or comma.
- 08 Click the calendar icon beside **Start Date**. Use its month arrows if needed; click **next** Monday's date.

YOU SHOULD SEE

Description, *Planned* **status**, **Fee** and **Start Date** are filled.

TIP OR RECOVERY

Use the **next** Monday agreed with your class. Write the date in your notebook.

- 09 Click **Save** once at the bottom of the **Edit** form.
- 10 Click **Details** on the **Course** record if its **fields** are not already visible.
- 11 Read **Description**, **Status**, **Fee** and **Start Date**. Confirm all four values.
- 12 If a value is wrong, click **Edit**, correct that value and click **Save** again.

YOU SHOULD SEE

The **Course details** are saved. Keep the **Course Name** unchanged.

Complete The Second Course

- 13** Click the **Sales** browser tab. Click **Courses** in its navigation bar.
- 14** Open the list-view arrow and select All **Courses**.
- 15** Click ***Data Analytics 101***.
- 16** Click **Edit** in the record header. If it is hidden, open the header action drop-down.

YOU SHOULD SEE

The **Edit** form for ***Data Analytics 101*** is open.

- 17** Click **Description**. Enter ***Introductory data analytics course***.
- 18** Open **Status** and select ***Planned***.
- 19** Click **Fee**. Enter ***12000*** without a *currency* symbol or comma.
- 20** Click the calendar icon beside **Start Date**. Use its month arrows if needed; click **next** Monday's date.

YOU SHOULD SEE

Description, ***Planned*** **status**, **Fee** and **Start Date** are filled.

TIP OR RECOVERY

Use the **next** Monday agreed with your class. Write the date in your notebook.

- 21** Click **Save** once at the bottom of the **Edit** form.
- 22** Click **Details** on the **Course** record if its **fields** are not already visible.
- 23** Read **Description**, **Status**, **Fee** and **Start Date**. Confirm all four values.
- 24** If a value is wrong, click **Edit**, correct that value and click **Save** again.

YOU SHOULD SEE

The **Course details** are saved. Keep the **Course Name** unchanged.

DAY 2, TOPIC 3: Create the Enrollment object and tab

Create the child object that stores one student joining one Course.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • NEW CUSTOM OBJECT • SYSTEM ADMIN • TAB WIZARD • SYSTEM ADMIN • SALES

Create Enrollment

- 01 Click the **Setup** browser tab. Click **Object Manager**.
- 02 Click **Create** at the top right. Click Custom Object.
- 03 Click Label and enter **Enrollment**. Click Plural Label and enter **Enrollments**.
- 04 Click **Description** and enter **One student joining one course**.

YOU SHOULD SEE

The **new** object is labeled **Enrollment**.

TIP OR RECOVERY

If your existing class object is spelled Enrolment, use that same object throughout; do not duplicate it.

- 05 Leave the generated Object Name as **Enrollment**.
- 06 Click Record Name and enter **Enrollment Number**.
- 07 Open Data Type and select *Auto Number*.
- 08 Click Display Format and enter **ENR- {0000}**. Click Starting Number and enter **1**.

YOU SHOULD SEE

New records will receive numbers such as **ENR-0001**. Keep the form open.

Save Enrollment And Its Tab

- 09 Under Optional Features, select *Allow Reports* and *Allow Activities*.
- 10 Select *Track Field History*. Keep Deployment **Status** = *Deployed*.
- 11 Under Search **Status**, select *Allow Search*.

- 12** Select Launch **New** Custom Tab Wizard after saving this custom object. Click **Save**.

YOU SHOULD SEE

The tab wizard opens for **Enrollment**.

- 13** Confirm Object = **Enrollment**. Click Tab Style and select one icon/color.
- 14** Click **Next**. Keep Apply one tab visibility to all profiles and *Default On*.
- 15** Click **Next**. Find **Sales** in the app list and ensure it is selected.
- 16** Click **Save**. Return to the **Sales** browser tab and reload the page.

YOU SHOULD SEE

The **Enrollments** tab is available. Do not add an **Enrollment** yet.

- 17** If **Enrollments** is visible in **Sales** or More, click it and move to “Add the **Student** lookup” [Day 2, Topic 4: Add the **Student** relationship and **Contacts**].
- 18** If it is missing, click the navigation pencil. Click Add More Items.
- 19** Select All if shown. Search **Enrollments**. Select its plus or checkbox and click Add 1 Nav Item.
- 20** Click **Save** in the navigation editor. Click **Enrollments** on the bar.

YOU SHOULD SEE

You can open the **Enrollments** list.

TIP OR RECOVERY

If the tab wizard was missed: **Setup** → Quick Find: Tabs → Tabs → Custom Object Tabs → **New** → **Enrollment**.

DAY 2, TOPIC 4: Add the Student relationship and Contacts

Create student Contacts and connect Enrollment to Contact through a lookup.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • SALES • SYSTEM ADMIN • SALES • ENROLLMENTS

Add The Student Lookup

- 01 Click the **Setup** browser tab. Click **Object Manager**.
- 02 Search **Enrollment** in the **Object Manager** Quick Find box. Click **Enrollment**.
- 03 Click **Fields & Relationships**. Click **New**.
- 04 Select *Lookup Relationship*. Click **Next**.

YOU SHOULD SEE

You are creating a lookup field on **Enrollment**.

- 05 Open the **Related To** drop-down. Select **Contact**.
- 06 Click **Next**. Click Field Label and enter **Student**.
- 07 Leave the generated Field Name as **Student**. Leave Required unselected.
- 08 Keep the other relationship settings unchanged. Click **Next**.

YOU SHOULD SEE

The **Student** field points to the existing **Contact** object.

- 09 On Establish **field-level security**, retain the selected visibility settings. Click **Next**.
- 10 On Add to page layouts, keep **Enrollment** Layout selected. Click **Next**.
- 11 On Add custom **related** lists, enter **Enrollments** for **Related** List Label; keep the **Contact** layouts selected.
- 12 Click **Save**. Confirm **Student** appears as Lookup(**Contact**) in the **Enrollment** field list.

YOU SHOULD SEE

The **Student** lookup is saved.

TIP OR RECOVERY

Contact already exists in Salesforce. Do not **create** a custom object named **Student**.

Create Priya'S Contact

- 13** In the System Admin browser, click **App Launcher**. Search **Sales** and click **Sales**.
- 14** Click **Contacts** on the navigation bar, or in More.
- 15** Click **New** at the top right. If a record-type screen appears, keep the default and click **Next**.
- 16** Click **First Name** and enter *Priya*. Click **Last Name** and enter *Sharma*.

YOU SHOULD SEE

The **New Contact** form contains *Priya Sharma*.

- 17** Click **Email** and enter *a working email address whose inbox you can check*.
- 18** Leave Account Name and other optional **fields** empty for this lab.
- 19** Click **Save** once. Wait for the **Contact** record to open.
- 20** Click **Details**. Confirm the name and **email** are correct.

YOU SHOULD SEE

The *Priya Sharma* **Contact** is saved.

TIP OR RECOVERY

If a duplicate warning appears, check the matching record with your trainer before creating another.

Create Rahul'S Contact

- 21** In the System Admin browser, click **App Launcher**. Search **Sales** and click **Sales**.
- 22** Click **Contacts** on the navigation bar, or in More.

- 23** Click **New** at the top right. If a record-type screen appears, keep the default and click **Next**.
- 24** Click **First Name** and enter *Rahul*. Click **Last Name** and enter *Verma*.

YOU SHOULD SEE

The **New Contact** form contains *Rahul Verma*.

- 25** Click **Email** and enter *a working email address whose inbox you can check*.
- 26** Leave Account Name and other optional **fields** empty for this lab.
- 27** Click **Save** once. Wait for the **Contact** record to open.
- 28** Click **Details**. Confirm the name and **email** are correct.

YOU SHOULD SEE

The *Rahul Verma Contact* is saved.

TIP OR RECOVERY

If a duplicate warning appears, check the matching record with your trainer before creating another.

Test The Student Lookup

- 29** Click **Enrollments** in the **Sales** navigation bar. Click **New**.
- 30** Click the **Student** lookup box and type *Priya*. Wait for matching results.
- 31** Click *Priya Sharma* in the results. Check that her selected name appears in the field.
- 32** Click **Save** once. Note the generated ENR number in your notebook as the practice **Enrollment**.

YOU SHOULD SEE

One practice **Enrollment** is saved with **Student** = *Priya Sharma*.

TIP OR RECOVERY

Selecting the search result is essential. Typing Priya without selecting it does not link the **Contact**.

- 33** Click **Contacts**. Open its list-view arrow and select All **Contacts**.

- 34 Use Search this list to enter *Priya*, press Enter, then click **Priya Sharma**.
- 35 Click **Related**. Scroll to the **Enrollments related** list.
- 36 Click the practice ENR number. Click **Details** and confirm **Student = Priya Sharma**.

YOU SHOULD SEE

The **Enrollment** is visible from Priya's **Contact** and links back to her.

Remove The Practice Record

- 37 Open the practice ENR number noted in your notebook. Confirm **Student = Priya Sharma**.
- 38 In its record header, click the action drop-down and click Delete.
- 39 In the confirmation window, check the record number and click Delete.
- 40 Click **Enrollments**. Select **All Enrollments** from the list-view arrow. Confirm the list is empty.

YOU SHOULD SEE

The temporary **Enrollment** is deleted. Priya's **Contact** is still present.

TIP OR RECOVERY

Delete only the temporary **Enrollment**. If other data must be kept, ask your trainer before the **next** step.

DAY 2, TOPIC 5: Link Enrollment to Course and payment

Require every Enrollment to belong to a Course and store the payment received.

WORKSPACE: SYSTEM ADMIN • SETUP

Add The Course Relationship

- 01 Click the **Setup** browser tab. Click **Object Manager**.
- 02 Search **Enrollment** and click **Enrollment**. Click **Fields & Relationships**.
- 03 Click **New**. Select *Master-Detail Relationship*.
- 04 Click **Next**. Open **Related To** and select **Course**.

YOU SHOULD SEE

Course is selected as the parent of **Enrollment**.

TIP OR RECOVERY

If existing records block this step, keep the error open and ask your trainer; do not delete other objects.

- 05 Click **Next**. Click Field Label and enter **Course**.
- 06 Leave the generated Field Name as **Course**.
- 07 In Sharing Setting, select *Read/Write*. Leave Allow reparenting unselected.
- 08 Keep other values unchanged. Click **Next**.

YOU SHOULD SEE

The required **Course** relationship uses *Read/Write* sharing.

- 09 On the **field-level security** page, keep the available settings. Click **Next**.
- 10 On Add to page layouts, keep **Enrollment** Layout selected. Click **Next**.
- 11 On Add custom **related** lists, use **Related** List Label = **Enrollments** and keep **Course** Layout selected.
- 12 Click **Save**. Confirm **Course** is listed as Master-Detail(**Course**).

YOU SHOULD SEE

Every **new Enrollment** now requires a **Course**.

TIP OR RECOVERY

Course owns the detail records. Their access follows the parent **Course**.

Add The Amount Paid Field

- 13** Click the gear icon at the top right. Click **Setup**.
- 14** Click **Object Manager**. Click its Quick Find box and enter **Enrollment**.
- 15** Click **Enrollment** in the object results. Click **Fields & Relationships** in its left menu.
- 16** Click **New** above the field list.

YOU SHOULD SEE

The **New** Custom Field wizard is open on **Enrollment**.

- 17** Select the radio button beside *Currency*. Click **Next**.
- 18** Click Field Label and enter **Amount Paid**. Keep Field Name as Amount_Paid.
- 19** Click Length and enter *16*. Click Decimal Places and enter *2*.
- 20** Leave Required unselected and Default Value empty.

YOU SHOULD SEE

The field **details** are filled. Continue to field access and layout.

- 21** Click **Next** at the bottom of the field **details** page.
- 22** On Establish **field-level security**, keep the preselected **profile** visibility settings. Click **Next**.
- 23** On Add to page layouts, keep **Enrollment** Layout selected.
- 24** Click **Save**. Look for the **new** field in **Fields & Relationships**.

YOU SHOULD SEE

The **new** field is saved on **Enrollment**.

TIP OR RECOVERY

If you see a red error, read it and correct that field. Do not click Back or **create** a duplicate field.

DAY 2, TOPIC 6: Add Course totals

Count child Enrollments and total their Amount Paid values on the parent Course.

WORKSPACE: SYSTEM ADMIN • SETUP • COURSE • SYSTEM ADMIN • SETUP, THEN SALES

Count Enrollments On Course

- 01 Click the **Setup** browser tab. Click **Object Manager**. Search **Course** and click **Course**.
- 02 Click **Fields & Relationships**. Click **New**.
- 03 Select *Roll-Up Summary*. Click **Next**.
- 04 Click Field Label and enter **Total Enrollments**. Leave the generated Field Name unchanged.

YOU SHOULD SEE

You are creating **Total Enrollments** on the parent **Course**.

- 05 Click **Next**. Open Summarized Object and select **Enrollments**.
- 06 Select COUNT under Select Roll-Up Type.
- 07 COUNT counts the child records; it does not require a Field to Aggregate.
- 08 Under Filter Criteria, select All records should be included in the calculation. Click **Next**.

YOU SHOULD SEE

The roll-up uses all **Enrollment** records for this **Course**.

- 09 On Establish **field-level security**, retain the selected visibility settings. Click **Next**.
- 10 On Add to page layouts, keep **Course** Layout selected.
- 11 Click **Save**. Confirm **Total Enrollments** appears in the field list.
- 12 Click the **Sales** browser tab. Open **Courses**, then **Salesforce Admin Fundamentals**, then **Details**.

YOU SHOULD SEE

The **Total Enrollments** roll-up is present and currently shows 0.

Sum Payments On Course

- 13** Click the **Setup** browser tab. Click **Object Manager**. Search **Course** and click **Course**.
- 14** Click **Fields & Relationships**. Click **New**.
- 15** Select *Roll-Up Summary*. Click **Next**.
- 16** Click Field Label and enter **Total Revenue**. Leave the generated Field Name unchanged.

YOU SHOULD SEE

You are creating **Total Revenue** on the parent **Course**.

- 17** Click **Next**. Open Summarized Object and select **Enrollments**.
- 18** Select SUM under Select Roll-Up Type.
- 19** Open Field to Aggregate and select **Amount Paid**.
- 20** Under Filter Criteria, select All records should be included in the calculation. Click **Next**.

YOU SHOULD SEE

The roll-up uses all **Enrollment** records for this **Course**.

- 21** On Establish **field-level security**, retain the selected visibility settings. Click **Next**.
- 22** On Add to page layouts, keep **Course** Layout selected.
- 23** Click **Save**. Confirm **Total Revenue** appears in the field list.
- 24** Click the **Sales** browser tab. Open **Courses**, then **Salesforce Admin Fundamentals**, then **Details**.

YOU SHOULD SEE

The **Total Revenue** roll-up is present and currently shows 0.

DAY 2, TOPIC 7: Enroll students and verify the totals

Create the real exercise Enrollments and confirm the Course totals.

WORKSPACE: SYSTEM ADMIN • SALES

Enroll Priya In The Course

- 01 In the System Admin browser, click the **Sales** tab.
- 02 Click **Enrollments** in the navigation bar. Click **New**.
- 03 Click **Course**. Type *Salesforce Admin Fundamentals*.
- 04 Wait for the lookup results. Click *Salesforce Admin Fundamentals* to select it.

YOU SHOULD SEE

The **Course** lookup shows the selected **Course** record.

- 05 Click **Student**. Type *Priya*. Wait for the lookup results.
- 06 Click *Priya Sharma* in the results. Check that the full selected name appears.
- 07 Click **Amount Paid** and enter *15000* without a *currency* symbol or comma.
- 08 Check the **Course**, **Student** and **Amount Paid**. Click **Save** once. Write down the saved ENR number.

YOU SHOULD SEE

An **Enrollment** is saved for *Priya Sharma* with **Amount Paid** = *15000*.

TIP OR RECOVERY

If **Save** shows an error, keep it visible. Correct the stated issue before trying **Save** again.

Enroll Rahul In The Course

- 09 In the System Admin browser, click the **Sales** tab.
- 10 Click **Enrollments** in the navigation bar. Click **New**.
- 11 Click **Course**. Type *Salesforce Admin Fundamentals*.
- 12 Wait for the lookup results. Click *Salesforce Admin Fundamentals* to select it.

YOU SHOULD SEE

The **Course** lookup shows the selected **Course** record.

- 13** Click **Student**. Type *Rahul*. Wait for the lookup results.
- 14** Click *Rahul Verma* in the results. Check that the full selected name appears.
- 15** Click **Amount Paid** and enter *15000* without a *currency* symbol or comma.
- 16** Check the **Course**, **Student** and **Amount Paid**. Click **Save** once. Write down the saved ENR number.

YOU SHOULD SEE

An **Enrollment** is saved for *Rahul Verma* with **Amount Paid** = *15000*.

TIP OR RECOVERY

If **Save** shows an error, keep it visible. Correct the stated issue before trying **Save** again.

Check The Day 2 Totals

- 17** Click **Courses**. Select All **Courses** from the list-view arrow.
- 18** Click *Salesforce Admin Fundamentals*. Click **Details**.
- 19** Click the browser Reload button. Confirm **Total Enrollments** = 2 and **Total Revenue** = *30000*.
- 20** Click **Related**. Open each ENR number in **Enrollments**. Check **Student** = Priya or Rahul and **Amount Paid** = *15000*.

YOU SHOULD SEE

Two **enrollments** produce total payments of 30,000. Day 2 is complete.

TIP OR RECOVERY

If the totals differ, open each **related Enrollment** and check its **Student**, **Course** and **Amount Paid**.

DAY 3: CONTROL ACCESS

Starting point: The Course, Contact and Enrollment records from Day 2.

Goal: Give trainers the access they need to work with live courses.

Finish with: Trainer One can work on shared courses, with no Delete access.

WHAT WE ARE COVERING

Organization-Wide Default The starting level of record access for everyone in the org.	Role A user's position in the record-visibility hierarchy.
Sharing rule An automatic exception that gives selected users access to qualifying records.	Profile A user's base permissions for objects, fields and system functions.
Object permission Controls whether a user can read, create, edit or delete records of an object.	Field-level security Controls whether a field is visible and whether its value can be edited.

TOPICS IN THIS DAY

01 Set the private sharing baseline Make Course records private before adding controlled access.	02 Create roles and Live-Course sharing Build the role hierarchy and share only Courses whose Status is Live.
03 Create the Trainer profile and permissions Give trainers the required object and field access without broad system access.	04 Create Trainer One and open a separate session Create the test user and keep the admin and trainer sessions separate.
05 Test and repair Course access Prove that the sharing rule responds to the Course Status.	06 Create trainer-owned data and verify the result Create records as Trainer One and confirm their totals and creator.

DAY 3, TOPIC 1: Set the private sharing baseline

Make Course records private before adding controlled access.

WORKSPACE: SYSTEM ADMIN • SALES • SYSTEM ADMIN • SETUP

Start Day 3 As Admin

- 01 Sign in to the same class org with your original admin **username**.
- 02 Click your avatar. Confirm your own name, then close the menu.
- 03 Open **Sales**, then **Courses**, then **Salesforce Admin Fundamentals**. Click **Details**.
- 04 Confirm **Total Enrollments** = 2 and **Total Revenue** = 30000 before changing access.

YOU SHOULD SEE

The Day 2 data is ready for the access exercises.

Make Course Private

- 05 Click the gear icon at the top right. Click **Setup**.
- 06 Click the left Quick Find box. Enter *Sharing Settings*.
- 07 Click Sharing Settings in the results.
- 08 At the top, find **Organization-Wide Defaults** and click its **Edit** button.

YOU SHOULD SEE

The organization-wide sharing defaults are editable.

- 09 Scroll to the **Course** row. Open Default Internal Access and select *Private*.
- 10 If Default External Access is shown for **Course**, confirm it is *Private*.
- 11 In the **Course** row, keep Grant Access Using Hierarchies selected.
- 12 Click **Save**. If a confirmation appears, confirm the change and wait for recalculation.

YOU SHOULD SEE

Course shows *Private* in Sharing Settings.

TIP OR RECOVERY

System Admin still sees all **courses**. We test restricted access in a separate *Trainer One* session.

DAY 3, TOPIC 2: Create roles and Live-Course sharing

Build the role hierarchy and share only Courses whose Status is Live.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • SALES

Create The Trainer Roles

- 01 In the left **Setup** Quick Find box, replace the search with Roles.
- 02 Click Roles in the results. If an introduction appears, click Set Up Roles.
- 03 Choose Tree View if needed. Find the top **role**, usually CEO.
- 04 Click Add **Role** directly beneath that top **role**.

YOU SHOULD SEE

The **New Role** form opens under the top **role**.

- 05 Click Label and enter *Trainer Manager*. Leave the generated **Role** Name unchanged.
- 06 Confirm This **Role Reports To** is the top **role** selected on the previous screen.
- 07 Leave other settings unchanged. Click **Save**.
- 08 Click Set Up Roles or the link to the hierarchy. Find Trainer Manager in the tree.

YOU SHOULD SEE

Trainer Manager appears below the top **role**.

- 09 Click Add **Role** directly beneath Trainer Manager.
- 10 Click Label and enter Trainer. Leave the generated **Role** Name unchanged.
- 11 Confirm This **Role Reports To** = Trainer Manager. Click **Save**.
- 12 Return to Set Up Roles. Expand the tree with its plus icons if necessary.

YOU SHOULD SEE

The hierarchy reads top **role** → Trainer Manager → Trainer.

TIP OR RECOVERY

Do not assign the **student** admin to a **new role**. This exercise creates the two roles for testing.

Share Live Courses

- 13** In **Setup** Quick Find, enter *Sharing Settings*. Click Sharing Settings in the results.
- 14** Scroll down to **Course** Sharing Rules. Click **New** in that section.
- 15** Click Label and enter *Share Live Courses to Trainers*. Leave the generated Rule Name unchanged.
- 16** Under Rule Type, select Based on criteria.

YOU SHOULD SEE

The sharing rule is a criteria-based **Course** rule.

- 17** In the first criteria row, open Field and select **Status**.
- 18** Open Operator and select equals.
- 19** Click Value and select Live. If the value picker opens, choose Live and confirm it.
- 20** In Share with, choose Roles in the first selector and Trainer in the **role** selector.

YOU SHOULD SEE

The rule matches **Status** = Live and shares with the Trainer **role**.

- 21** Set **Course** Access to *Read/Write*.
- 22** Click **Save** at the bottom of the rule.
- 23** If Salesforce asks to recalculate sharing, click OK or confirm.
- 24** Wait for the rule list to return. Check the label and the Live criterion.

YOU SHOULD SEE

The Live **Course** sharing rule has been saved.

Prepare Two Different Statuses

25 Click the **Sales** browser tab. Click **Courses** and select All **Courses**.

26 Click *Salesforce Admin Fundamentals*. Click **Edit**.

27 Open **Status** and select Live. Click **Save**.

28 Click **Details** and confirm **Status** = Live.

YOU SHOULD SEE

The admin **course** is Live and will match the sharing rule.

29 Click **Courses**. Click *Data Analytics 101*. Click **Edit**.

30 Open **Status** and select *Planned*. Click **Save**.

31 Click **Details**. Confirm **Status** = *Planned* and the owner is your admin user.

32 Open *Salesforce Admin Fundamentals* and confirm its owner is also your admin user.

YOU SHOULD SEE

One admin-owned **Course** is Live and the other is *Planned*.

TIP OR RECOVERY

If the owner differs, ask your trainer to correct the test data before checking access.

DAY 3, TOPIC 3: Create the Trainer profile and permissions

Give trainers the required object and field access without broad system access.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • SETUP • PROFILES • SYSTEM ADMIN • TRAINER PROFILE

Use The Profile Settings View

- 01 Click the **Setup** browser tab. Enter *User Management Settings* in the left Quick Find box.
- 02 Click User Management Settings in the results.
- 03 Find Enhanced **Profile** User Interface. If it is off, turn it on; click **Save** if shown.
- 04 In Quick Find, enter *Profiles*. Click Profiles in the results.

YOU SHOULD SEE

Profiles will use the **Object Settings** interface shown in this guide.

Create The Trainer Profile

- 05 In the Profiles list, find *Standard User*. Use the list search or browser Find if needed.
- 06 Click Clone on the *Standard User* row. Do not click **Edit** on the original **profile**.
- 07 Click **Profile** Name and enter Trainer.
- 08 Click **Save**. Confirm the **profile** heading says Trainer and the **User License** is Salesforce.

YOU SHOULD SEE

You are editing your **new** custom Trainer **profile**.

Set Course Permissions

- 09 In the Trainer **profile**, click **Object Settings** if the object list is not already open.
- 10 Click **Courses** in the object list.
- 11 Click **Edit**. Set Tab Settings to *Default On*.

- 12** Under **Object Permissions**, select Read, **Create** and **Edit**.

YOU SHOULD SEE

The Trainer **profile** has Read, **Create** and **Edit** selected for **Courses**.

- 13** Clear Delete if it is selected.

- 14** Clear View All Records (or View All) if selected.

- 15** Clear Modify All Records (or Modify All) and View All **Fields** if they are shown and selected.

- 16** Scroll to **Field Permissions**. Select Read Access and **Edit** Access for **Description**.

YOU SHOULD SEE

Broad access is cleared; continue with the **field permissions**.

- 17** Select Read Access and **Edit** Access for **Status**, **Fee** and **Start Date**.

- 18** Keep **Course Name** accessible. Select Read Access for **Total Enrollments** and **Total Revenue**.

- 19** Leave the roll-up **fields** read-only; they are calculated automatically.

- 20** Click **Save**. Click **Object Settings** in the breadcrumb or return to the Trainer **profile** overview.

YOU SHOULD SEE

The **Courses** permissions are saved on the Trainer **profile**.

Set Enrollment Permissions

- 21** In the Trainer **profile**, click **Object Settings** if the object list is not already open.

- 22** Click **Enrollments** in the object list.

- 23** Click **Edit**. Set Tab Settings to *Default On*.

- 24** Under **Object Permissions**, select Read, **Create** and **Edit**.

YOU SHOULD SEE

The Trainer **profile** has Read, **Create** and **Edit** selected for **Enrollments**.

25	Clear Delete if it is selected.
26	Clear View All Records (or View All) if selected.
27	Clear Modify All Records (or Modify All) and View All Fields if they are shown and selected.
28	Scroll to Field Permissions . Select Read Access and Edit Access for Student .

YOU SHOULD SEE

Broad access is cleared; continue with the **field permissions**.

29	Confirm the required Course relationship remains accessible; its access may be fixed.
30	Select Read Access and Edit Access for Amount Paid .
31	Keep Enrollment Number readable. It is an <i>auto number</i> , so you do not type it.
32	Click Save . Click Object Settings in the breadcrumb or return to the Trainer profile overview.

YOU SHOULD SEE

The **Enrollments** permissions are saved on the Trainer **profile**.

Set Contact Permissions

33	In the Trainer profile , click Object Settings if the object list is not already open.
34	Click Contacts in the object list.
35	Click Edit . Keep the current tab setting.
36	Under Object Permissions , select Read, Create and Edit .

YOU SHOULD SEE

The Trainer **profile** has Read, **Create** and **Edit** selected for **Contacts**.

37	Clear Delete if it is selected.
38	Clear View All Records (or View All) if selected.

- 39** Clear Modify All Records (or Modify All) and View All **Fields** if they are shown and selected.
- 40** Scroll to **Field Permissions**. Keep the required Name field accessible.

YOU SHOULD SEE

Broad access is cleared; continue with the **field permissions**.

- 41** Keep **First Name** and **Last Name** accessible if they are listed separately.
- 42** Select Read Access and **Edit** Access for **Email**.
- 43** Leave other field settings unchanged. **Contacts** needs **Create** for the Neha exercise.
- 44** Click **Save**. Click **Object Settings** in the breadcrumb or return to the Trainer **profile** overview.

YOU SHOULD SEE

The **Contacts** permissions are saved on the Trainer **profile**.

Check Broad System Access

- 45** Click Trainer in the breadcrumb near the top to return to the **profile** overview. Click **System Permissions**.
- 46** Click **Edit**. Find View All Data and confirm its checkbox is clear.
- 47** Find Modify All Data and confirm its checkbox is clear.
- 48** Leave other permissions unchanged. Click **Save**.

YOU SHOULD SEE

Trainer does not have **system permissions** that bypass the sharing exercise.

TIP OR RECOVERY

Only change the custom Trainer **profile**. Keep the System Administrator **profile** unchanged.

DAY 3, TOPIC 4: Create Trainer One and open a separate session

Create the test user and keep the admin and trainer sessions separate.

WORKSPACE: SYSTEM ADMIN • SETUP • TRAINER ONE • SECOND BROWSER

Create Trainer One

- 01 In **Setup** Quick Find, enter *Users*. Click Users under the Users heading.
- 02 Click **New** User at the top of the list.
- 03 Click **First Name** and enter Trainer. Click **Last Name** and enter *One*.
- 04 Click Alias and enter *trone*.

YOU SHOULD SEE

The **New** User form contains *Trainer One*.

- 05 Click **Email** and enter a *real email address you can open now*.
- 06 Click **Username**. Enter a globally unique **email**-format value different from your admin **username**.
- 07 Write this **username** in your notebook under *Trainer One*. Keep the generated Community Nickname if shown.
- 08 Open **Role** and select Trainer.

YOU SHOULD SEE

Trainer One has a working **email**, a separate **username** and the Trainer **role**.

- 09 Open **User License** and select Salesforce.
- 10 Open **Profile** and select Trainer. If necessary, wait for the license change to **refresh** the **profile** list.
- 11 Confirm Active is selected. Leave other feature-license checkboxes unchanged.
- 12 Scroll to Locale Settings. Keep the form open.

YOU SHOULD SEE

Trainer One uses the Salesforce license and Trainer **profile**.

TIP OR RECOVERY

If Salesforce is unavailable or there are no free licenses, keep the form open and ask your trainer.

- 13** Open Time Zone and select the GMT+05:30 *India/Asia-Kolkata* option shown.
- 14** Set Locale to English (*India*) and Language to English. Keep **Email** Encoding = Unicode (UTF-8).
- 15** Select Generate **new** password and notify user immediately.
- 16** Click **Save** once. Wait for the user detail page.

YOU SHOULD SEE

Trainer One is saved and a password **setup email** has been requested.

Open A Separate Trainer Session

- 17** Keep your System Admin browser open. Open a different browser, such as Firefox or Edge.
- 18** Open *Trainer One*'s activation **email**. Copy its activation link.
- 19** Paste that link into the second browser address bar and press Enter.
- 20** Enter and confirm *Trainer One*'s **new** password. Complete any verification prompts shown.

YOU SHOULD SEE

Trainer One's password page is open in the separate browser.

TIP OR RECOVERY

A *private* window also works, but use one separate *private* session for *Trainer One* only.

- 21** Finish the password page by clicking Change Password or **Save**.
- 22** If a login screen appears, enter the *Trainer One* **username** and password. Click Log In.

- 23** Complete any verification prompt. Click the avatar at the top right after Salesforce opens.
- 24** Confirm the displayed name is ***Trainer One***. Close the avatar menu.

YOU SHOULD SEE

You have two sessions: your admin in the original browser and ***Trainer One*** in the second.

TIP OR RECOVERY

If the avatar shows your admin, stop and reopen the Trainer activation/login link in the separate browser.

DAY 3, TOPIC 5: Test and repair Course access

Prove that the sharing rule responds to the Course Status.

WORKSPACE: TRAINER ONE • SALES • SYSTEM ADMIN • ONLY IF NEEDED • SYSTEM ADMIN, THEN TRAINER ONE

Check What Trainer One Sees

- 01 In the *Trainer One* browser, click **App Launcher**. Search **Sales** and click the **Sales** app.
- 02 Click **Courses** in the navigation bar or More menu.
- 03 Open the list-view arrow beside Recently Viewed and select All **Courses**.
- 04 Confirm *Salesforce Admin Fundamentals* is listed and *Data Analytics 101* is absent.

YOU SHOULD SEE

Trainer One sees the shared Live **course** only.

TIP OR RECOVERY

Missing **Courses**? Pencil → Add More Items → All → search **Courses** → select it → Add 1 Nav Item → **Save**.

- 05 Click *Salesforce Admin Fundamentals*. Click **Edit** in its header.
- 06 Click **Description**. Enter *Trainer reviewed this course*.
- 07 Click **Save**. Click **Details** and confirm the changed **Description**.
- 08 Open the record header action drop-down. Look for Delete without clicking another action.

YOU SHOULD SEE

Trainer One can **edit** the **description** and has no Delete action.

TIP OR RECOVERY

If Delete appears, return to the admin browser and check the Trainer **profile object permissions**.

If The Access Test Differs

- 09** If the access test passed, skip this recovery subsection and go to “Change *Planned to Live*” [Day 3, Topic 5: Test and repair **Course** access].
- 10** As admin, open both **Course** records. Confirm their **Status** values and that your admin owns both.
- 11** In **Setup**, search Sharing Settings. Confirm **Course** is *Private* and the Live rule targets Roles: Trainer.
- 12** In **Setup**, search Users. Open **Trainer One** and check **Role** = Trainer and **Profile** = Trainer.

YOU SHOULD SEE

You have checked the data, sharing rule and test user.

TIP OR RECOVERY

If both **courses** still appear, ask your trainer to review broad permissions and other sharing grants.

Change Planned To Live

- 13** Switch to the System Admin browser. In **Sales**, click **Courses**.
- 14** Click **Data Analytics 101**. Click **Edit**.
- 15** Open **Status** and select Live. Click **Save**.
- 16** Wait for sharing to update. Switch to **Trainer One**'s browser and reload the **Courses** list.

YOU SHOULD SEE

Data Analytics 101 appears for **Trainer One** after sharing updates.

TIP OR RECOVERY

Keep All **Courses** selected. If the list has not updated, wait and reload once more before asking for help.

DAY 3, TOPIC 6: Create trainer-owned data and verify the result

Create records as Trainer One and confirm their totals and creator.

WORKSPACE: TRAINER ONE • SALES • SYSTEM ADMIN • SALES

Create Neha As Trainer One

- 01 In the *Trainer One* browser, click **App Launcher**. Search **Sales** and click **Sales**.
- 02 Click **Contacts** on the navigation bar, or in More.
- 03 Click **New** at the top right. If a record-type screen appears, keep the default and click **Next**.
- 04 Click **First Name** and enter *Neha*. Click **Last Name** and enter *Kumar*.

YOU SHOULD SEE

The **New Contact** form contains *Neha Kumar*.

- 05 Click **Email** and enter *a working email address whose inbox you can check*.
- 06 Leave Account Name and other optional **fields** empty for this lab.
- 07 Click **Save** once. Wait for the **Contact** record to open.
- 08 Click **Details**. Confirm the name and **email** are correct.

YOU SHOULD SEE

The *Neha Kumar Contact* is saved.

TIP OR RECOVERY

If a duplicate warning appears, check the matching record with your trainer before creating another.

Enroll Neha As Trainer One

- 09 In the *Trainer One* browser, click the **Sales** tab.
- 10 Click **Enrollments** in the navigation bar. Click **New**.
- 11 Click **Course**. Type *Salesforce Admin Fundamentals*.

- 12** Wait for the lookup results. Click **Salesforce Admin Fundamentals** to select it.

YOU SHOULD SEE

The **Course** lookup shows the selected **Course** record.

- 13** Click **Student**. Type *Neha*. Wait for the lookup results.

- 14** Click **Neha Kumar** in the results. Check that the full selected name appears.

- 15** Click **Amount Paid** and enter *15000* without a *currency* symbol or comma.

- 16** Check the **Course**, **Student** and **Amount Paid**. Click **Save** once. Write down the saved ENR number.

YOU SHOULD SEE

An **Enrollment** is saved for *Neha Kumar* with **Amount Paid** = *15000*.

TIP OR RECOVERY

If **Save** shows an error, keep it visible. Correct the stated issue before trying **Save** again.

Check The Day 3 Result

- 17** Switch to the System Admin browser. Click the **Sales** browser tab.

- 18** Click **Courses**, then **Salesforce Admin Fundamentals**. Click **Details**.

- 19** Reload the page. Confirm **Total Enrollments** = 3 and **Total Revenue** = *45000*.

- 20** Click **Related**. Open Neha's ENR number from your notebook. In **Details**, check **Created By** = *Trainer One*.

YOU SHOULD SEE

Three **enrollments** total 45,000. Day 3 is complete.

TIP OR RECOVERY

Enrollment inherits **Course** ownership. **Created By** tells you who added the **Enrollment**.

DAY 4: AUTOMATE ENROLLMENT

Starting point: Trainer One can sign in using a second browser.

Goal: Control Fee access, then automate a new enrollment.

Finish with: A welcome email, a follow-up task and a Course marked Live.

WHAT WE ARE COVERING

Permission set Extra access assigned to selected users without changing their profile.	Record-triggered flow Automation that starts when a Salesforce record is created or changed.
Flow element One action on the Flow canvas, such as sending email or creating a Task.	Resource A value available to the Flow, including a field on the record that triggered it.
Create Records A Flow element that saves a new record, such as the follow-up Task.	Update Records A Flow element that changes an existing record, such as the parent Course.

TOPICS IN THIS DAY

01 Hide Fee and grant an exception Hide Fee through field-level security and restore read access through a permission set.	02 Prepare email delivery Check Deliverability, sender prerequisites and Priya's working test inbox.
03 Create the Flow and configure its trigger Start a Flow whenever a new Enrollment is created.	04 Send the welcome email Send the student a message containing the selected Course name and Start Date.
05 Create the follow-up Task Create a Task linked to the student and Course and assign it to the Enrollment creator.	06 Mark the parent Course Live Update only the Course selected on the new Enrollment.
07 Save, activate and test the Flow Run a complete test and check the email, Task, Course update, totals and access.	08 Recover from Flow or email problems Use the visible error or missing output to identify the correct recovery path.

DAY 4, TOPIC 1: Hide Fee and grant an exception

Hide Fee through field-level security and restore read access through a permission set.

WORKSPACE: SYSTEM ADMIN AND TRAINER ONE • SYSTEM ADMIN • SETUP • SYSTEM ADMIN, THEN TRAINER ONE • SYSTEM ADMIN • SALES • SYSTEM ADMIN • PERMISSION SET • TRAINER ONE • SALES

Start Day 4 With Two Sessions

- 01 Open the original browser and sign in as your System Admin user.
- 02 Open the second browser and sign in as *Trainer One*.
- 03 In each browser, open **Sales**, click **Courses** and open *Salesforce Admin Fundamentals*.
- 04 Click the avatar in each browser and confirm the correct user before proceeding.

YOU SHOULD SEE

Both users have the same **Course** open for comparing field access.

Hide Fee From Trainers

- 05 In the admin browser, click the gear icon. Click **Setup**.
- 06 Click **Object Manager**. Search **Course** and click **Course**.
- 07 Click **Fields & Relationships**. Click the **Fee** field label.
- 08 Click Set **Field-Level Security**.

YOU SHOULD SEE

The **Fee field-level security** page lists profiles.

- 09 Find the Trainer **profile** row. Clear its Visible checkbox.
- 10 Leave the System Administrator row unchanged. Click **Save**.
- 11 Switch to *Trainer One*. Reload *Salesforce Admin Fundamentals* and open **Details**.
- 12 Confirm **Fee** is absent. Click **Edit**, confirm **Fee** is absent there too, then click Cancel.

YOU SHOULD SEE

Trainer One cannot see **Fee** in **Details** or **Edit**.

- 13** Switch to the System Admin **Sales** tab. Open the same **Course** and reload it.
- 14** Click **Details**. Confirm **Fee** is still visible as *15000*.
- 15** If **Fee** is visible to *Trainer One*, check that you changed the Trainer row and reloaded the correct browser.
- 16** If it remains visible, show your trainer so they can check other permission sets and View All **Fields**.

YOU SHOULD SEE

Fee is hidden from *Trainer One* and visible to System Admin.

Create The Fee Permission Set

- 17** In the admin **Setup** tab, enter *Permission Sets* in the left Quick Find box.
- 18** Click Permission Sets in the results. Click **New**.
- 19** Click Label and enter *View Course Fee*. Leave the generated API Name unchanged.
- 20** Leave License as --None--. Click **Save**.

YOU SHOULD SEE

The View **Course Fee permission set** opens.

- 21** Click **Object Settings**. Click **Courses** in the list.
- 22** Click **Edit**. Scroll to **Field Permissions**.
- 23** On the **Fee** row, select Read Access. Keep **Edit** Access clear.
- 24** Leave other permissions unchanged. Click **Save**.

YOU SHOULD SEE

The **permission set** grants read-only access to **Fee**.

Assign The Fee Exception

- 25 Click the View **Course Fee** breadcrumb to return to its overview.
- 26 Click Manage Assignments. Click Add Assignments.
- 27 Select the checkbox for **Trainer One** only.
- 28 Click **Next** if shown. Keep no expiration unless your trainer specifies one.

YOU SHOULD SEE

Trainer One is selected to receive the **permission set**.

- 29 Click Assign. Read the assignment result and confirm Success.
- 30 Click **Done**.
- 31 Switch to **Trainer One**. Reload **Salesforce Admin Fundamentals** and click **Details**.
- 32 Confirm **Fee** is visible and shows *15000*.

YOU SHOULD SEE

Trainer One can now read **Fee**.

- 33 Still as **Trainer One**, click **Edit** on the **Course**.
- 34 Find **Fee**. It should be absent from the editable inputs or displayed as read-only.
- 35 Do not change any **fields**. Click Cancel.
- 36 Return to **Details** and confirm **Fee** is visible there.

YOU SHOULD SEE

Trainer One can read **Fee** but cannot **edit** it.

Test Removing The Exception

- 37 Switch to admin **Setup**. Open Permission Sets, then View **Course Fee**.
- 38 Click Manage Assignments. Select the **Trainer One** checkbox.
- 39 Click Remove Assignments or Remove. Confirm the removal if prompted.

40 Switch to *Trainer One*. Reload the **Course** and click **Details**.

YOU SHOULD SEE

Fee is hidden again because the permission-set assignment was removed.

41 Return to admin: View **Course Fee**, then Manage Assignments. Click Add Assignments.

42 Select *Trainer One*. Click **Next** if shown, then Assign.

43 Confirm Success and click **Done**.

44 Switch to *Trainer One*. Reload the **Course** and confirm **Fee** is visible again.

YOU SHOULD SEE

Trainer One finishes with the **permission set** assigned and read-only **Fee** access.

DAY 4, TOPIC 2: Prepare email delivery

Check Deliverability, sender prerequisites and Priya's working test inbox.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • SALES

Prepare Email Delivery

01 In the admin **Setup** tab, enter *Deliverability* in Quick Find.

02 Click Deliverability. Click **Edit** if the page is not already editable.

03 Open Access Level and select All **email**.

04 Click **Save**. Confirm Access Level still shows All **email**.

YOU SHOULD SEE

The practice org is configured to allow outgoing **email**.

05 In **Setup** Quick Find, enter *Users*. Click Users and open your System Admin user.

06 Check the **email** address on your admin user record. Open that inbox in another tab.

07 Complete any pending Salesforce **email** verification message for this address.

08 Ask the trainer to confirm the sending domain is verified before the class tests **email**.

YOU SHOULD SEE

The admin sender address and sending-domain requirements have been checked.

TIP OR RECOVERY

Domain verification requires control of the sending domain. Your trainer handles this org prerequisite.

09 In the admin **Sales** tab, click **Contacts**. Select All **Contacts**.

10 Search the list for Priya, press Enter and click *Priya Sharma*. Click **Details**.

11 Check **Email**. If wrong, click **Edit**, enter *your working test inbox* and click **Save**.

12 Open that inbox in another tab. Keep it available for the Flow test.

YOU SHOULD SEE

Priya's **Contact** points to an inbox you can check.

TIP OR RECOVERY

A missing **email** alone does not tell you whether the Flow ran. We will also check the task and **Course**.

DAY 4, TOPIC 3: Create the Flow and configure its trigger

Start a Flow whenever a new Enrollment is created.

WORKSPACE: SYSTEM ADMIN • SETUP • SYSTEM ADMIN • FLOW BUILDER

Create A Record-Triggered Flow

- 01 Click the admin **Setup** tab. Enter *Flows* in the left Quick Find box.
- 02 Click Flows under Process Automation. Click **New** Flow.
- 03 If categories appear, click Triggered. Select Record-Triggered Flow.
- 04 Click **Create** if shown. Wait for Flow Builder and the Start configuration to open.

YOU SHOULD SEE

A **new** record-triggered Flow is open.

- 05 If the Start panel is closed, click Start on the canvas and click **Edit**.
- 06 Click Object. Search **Enrollment** and select your **Enrollment** custom object.
- 07 Under Trigger the Flow When, select *A record is created*.
- 08 Under Set Entry Conditions, set Condition Requirements to None.

YOU SHOULD SEE

The Flow triggers when a **new Enrollment** is created.

- 09 Under Optimize the Flow for, select *Actions and Related Records*.
- 10 Leave **Run** Asynchronously and scheduled paths unselected for this lab.
- 11 Click **Done** if shown. In auto-saving panels, click the close arrow or X to return to the canvas.
- 12 Confirm the canvas shows Start, the **Run** Immediately path and End in Auto-Layout.

YOU SHOULD SEE

The Flow runs after an **Enrollment** is saved.

TIP OR RECOVERY

If a panel has no **Done** button, its changes are retained on the canvas; close the panel to continue.

DAY 4, TOPIC 4: Send the welcome email

Send the student a message containing the selected Course name and Start Date.

WORKSPACE: SYSTEM ADMIN • FLOW BUILDER • SYSTEM ADMIN • WELCOME STUDENT

Add The Welcome Email Action

- 01 On the **Run** Immediately path, click the plus circle directly below Start.
- 02 Click Action in the element picker.
- 03 Click the action search box and enter *Send Email*.
- 04 Click the Send **Email** action result. Click Add or **Done** if the picker asks you to confirm.

YOU SHOULD SEE

The Send **Email** configuration panel opens.

- 05 Click Label and enter *Welcome Student*. Leave API Name as Welcome_Student.
- 06 Expand Configure Recipient **Details** by clicking its heading if it is collapsed.
- 07 Click Recipient Addresses. Open its resource picker using the search or lookup control.
- 08 Select Triggering **Enrollment** (also called \$Record). Expand its **Student** relationship.

YOU SHOULD SEE

The resource picker is showing **fields** from the linked **student Contact**.

- 09 Select **Email** under **Student**. Confirm Recipient Addresses displays the selected resource.
- 10 Leave CC Addresses and BCC Addresses empty.
- 11 Expand Configure Sender **Details**. Open **Sender Type** and select *Current User*.
- 12 Leave Sender **Email** Address empty. Keep the action panel open.

YOU SHOULD SEE

The recipient is the linked **Contact's Email** and the sender is *Current User*.

TIP OR RECOVERY

Choose the **Email** field under the **Student** relationship, not **Student** ID or a typed **student** name.

Write The Welcome Message

- | | |
|-----------|--|
| 13 | Expand Configure Email Content by clicking its heading. |
| 14 | Select Compose Email Content. Do not select Use Email Template for this lab. |
| 15 | Click Subject and enter <i>Welcome to your course</i> . |
| 16 | Click the Body input. If an editor mode selector appears, select plain text. |

YOU SHOULD SEE

The **email subject** is entered and the Body is ready for plain text.

- | | |
|-----------|---|
| 17 | In Body, type Welcome to followed by one space. |
| 18 | Click Insert a resource. Select Triggering Enrollment (\$Record). |
| 19 | Expand the Course relationship. Select Course Name (the Name field). |
| 20 | Place the cursor after the resource. Type ". See you on ", including the final space. |

YOU SHOULD SEE

Body contains a **Course Name** resource after the welcome text.

- | | |
|-----------|--|
| 21 | Click Insert a resource again. Select Triggering Enrollment (\$Record). |
| 22 | Expand Course . Select Start Date . |
| 23 | Place the cursor after that resource and type a period. |
| 24 | If Rich-Text-Formatted Body is shown, click its value box and select <i>False</i> . |

YOU SHOULD SEE

The message contains both the **Course Name** and **Start Date** resources.

TIP OR RECOVERY

Rich-Text-Formatted Body is a *true/false* setting. Do not paste the **email** message into it.

- | | |
|----|--|
| 25 | Review Recipient Addresses: Triggering Enrollment → Student → Email . |
| 26 | Review Sender Type : <i>Current User</i> . Review Subject : Welcome to your course . |
| 27 | Review Body: Welcome to [Course Name]. See you on [Start Date]. The brackets represent selected resources. |
| 28 | Click Done , or close the panel if Done is absent. |

YOU SHOULD SEE

Welcome Student appears between Start and End on the canvas.

DAY 4, TOPIC 5: Create the follow-up Task

Create a Task linked to the student and Course and assign it to the Enrollment creator.

WORKSPACE: SYSTEM ADMIN • FLOW BUILDER • SYSTEM ADMIN • CREATE FOLLOW-UP TASK

Add The Follow-Up Task

- 01 Click the plus circle below *Welcome Student* on the **Run** Immediately path.
- 02 Click **Create** Records in the element picker.
- 03 Click Label and enter *Create Follow-Up Task*. Leave the generated API Name unchanged.
- 04 Choose to set field values manually; in older panels, select Use separate resources and literal values.

YOU SHOULD SEE

A **Create** Records element is open for manual field mapping.

- 05 Set How Many Records to **Create** to One, if the choice is shown.
- 06 Click Object. Search Task and select Task.
- 07 Under Set Field Values, click the first Field selector. Search **Subject** and select **Subject**.
- 08 Click that row's Value and enter *Call new student*. Keep the panel open.

YOU SHOULD SEE

The **new** Task has **Subject** = *Call new student*.

Link The Task To Its Student

- 09 Click Add Field at the bottom of the field mapping rows.
- 10 In the **new** Field box, search Name ID. Select Name ID (Whold).
- 11 Click Value and open the resource picker. Select Triggering **Enrollment** (\$Record).
- 12 Select **Student**, the **Contact** ID field on **Enrollment**. Do not select the **student's** name or **Email**.

YOU SHOULD SEE

Task Name ID is mapped to the **Enrollment's Student ID**.

Link The Task To Its Course

- | | |
|-----------|---|
| 13 | Click Add Field below the existing mappings. |
| 14 | In the new Field box, search Related To ID . Select Related To ID (WhatId). |
| 15 | Click Value and open the resource picker. Select Triggering Enrollment (\$Record). |
| 16 | Select Course , the Course ID field on Enrollment . Do not choose Course Name . |

YOU SHOULD SEE

Task **Related To ID** is mapped to the **Enrollment's Course ID**.

Assign The Task To Its Creator

- | | |
|-----------|--|
| 17 | Click Add Field. In the new Field box, search Assigned To ID . Select Assigned To ID (OwnerId). |
| 18 | Click Value and open the resource picker. Select Triggering Enrollment (\$Record). |
| 19 | Select Created By ID (CreatedById). This identifies the user who creates the Enrollment . |
| 20 | Leave Due Date Only unset for the core lab. Do not add a due-date row. |

YOU SHOULD SEE

The Task will be **assigned to** the **Enrollment** creator.

TIP OR RECOVERY

The core lab has no task due date. Your trainer may add the optional two-day formula later.

- | | |
|-----------|---|
| 21 | Check Subject = <i>Call new student</i> . |
| 22 | Check Name ID = Student ID and Related To ID = Course ID from the triggering Enrollment . |

23 Check **Assigned To** ID = the triggering **Enrollment's Created By ID**.

24 Click **Done**, or close the panel if **Done** is absent.

YOU SHOULD SEE

Create Follow-Up Task appears below ***Welcome Student*** on the canvas.

DAY 4, TOPIC 6: Mark the parent Course Live

Update only the Course selected on the new Enrollment.

WORKSPACE: SYSTEM ADMIN • FLOW BUILDER

Update The Parent Course

- 01 Click the plus circle below **Create** Follow-Up Task.
- 02 Click Update Records in the element picker.
- 03 Click Label and enter *Mark Course Live*. Leave the generated API Name unchanged.
- 04 Select Specify conditions to identify records, and set **fields** individually.

YOU SHOULD SEE

The Update Records element will find a **Course** using a condition.

- 05 Click Object. Search **Course** and select **Course**.
- 06 Set Condition Requirements to All Conditions Are Met (AND).
- 07 In the first filter row, open Field and select **Record ID (Id)**.
- 08 Open Operator and select Equals.

YOU SHOULD SEE

The filter compares the **Course Record ID** to the value you select **next**.

- 09 In the filter Value box, open the resource picker. Select Triggering **Enrollment** (\$Record).
- 10 Select **Course**, the **Course ID** field on the triggering **Enrollment**.
- 11 Under Set Field Values for the **Course** Records, select **Status** in the Field box.
- 12 In its Value box, select or enter Live, matching the *picklist* value exactly.

YOU SHOULD SEE

The update targets only the **Course** chosen on the **new Enrollment**.

13	Check the filter: Course Record ID Equals Triggering Enrollment → Course ID .
14	Check the field update: Status = Live.
15	Click Done , or close the panel if Done is absent.
16	Read the canvas: Start → <i>Welcome Student</i> → Create Follow-Up Task → Mark Course Live → End.

YOU SHOULD SEE

The three actions appear in the intended vertical order.

TIP OR RECOVERY

Do not remove the **Record ID** filter. It prevents the Flow from updating unrelated **courses**.

DAY 4, TOPIC 7: Save, activate and test the Flow

Run a complete test and check the email, Task, Course update, totals and access.

WORKSPACE: SYSTEM ADMIN • FLOW BUILDER • SYSTEM ADMIN • SALES • SYSTEM ADMIN • TEST INBOX • TRAINER ONE • SALES

Save And Activate The Flow

- 01 Click **Save** at the top right of Flow Builder.
- 02 In the **Save** window, click **Flow Label** and enter *Enrollment Welcome*.
- 03 Leave **Flow API Name** as Enrollment_Welcome. Leave other **fields** unchanged.
- 04 Click **Save** in the window. Wait for saving to finish.

YOU SHOULD SEE

Enrollment Welcome is saved. It still needs activation.

- 05 Read any errors shown by Flow Builder. If there are errors, keep them open and show your trainer.
- 06 When there are no blocking errors, click **Activate** at the top right.
- 07 Confirm activation if a confirmation window appears.
- 08 Check that the **status** is Active or that a **Deactivate** button is now available.

YOU SHOULD SEE

The Flow is Active and ready for a **new Enrollment**.

TIP OR RECOVERY

Saving and activating are separate actions. Editing an old **Enrollment** will not **run** this **create-only** Flow.

Create The Planned Test Course

- 09 Click the admin **Sales** browser tab. Click **Courses**.
- 10 Click **New**. Click **Course Name** and enter *Cyber Security Intro*.
- 11 Click **Description** and enter *Introduction to information security*.

12 Open **Status** and select *Planned*.

YOU SHOULD SEE

The test **course** has a name, **description** and *Planned status*.

13 Click **Fee** and enter *10000*.

14 Click the **Start Date** calendar. Use the month arrows as needed and select the date two weeks from today.

15 Click **Save** once. Click **Details** on the saved **Course**.

16 Confirm **Status** = *Planned*, **Fee** = *10000* and the correct **Start Date**.

YOU SHOULD SEE

Cyber Security Intro is saved as *Planned* before the Flow test.

TIP OR RECOVERY

Write the chosen **Start Date** in your notebook so you can compare it with the welcome email.

Trigger The Enrollment Flow

17 In the System Admin browser, click the **Sales** tab.

18 Click **Enrollments** in the navigation bar. Click **New**.

19 Click **Course**. Type *Cyber Security Intro*.

20 Wait for the lookup results. Click *Cyber Security Intro* to select it.

YOU SHOULD SEE

The **Course** lookup shows the selected **Course** record.

21 Click **Student**. Type *Priya*. Wait for the lookup results.

22 Click *Priya Sharma* in the results. Check that the full selected name appears.

23 Click **Amount Paid** and enter *10000* without a *currency* symbol or comma.

24 Check the **Course**, **Student** and **Amount Paid**. Click **Save** once. Write down the saved ENR number.

YOU SHOULD SEE

An **Enrollment** is saved for *Priya Sharma* with **Amount Paid** = 10000.

TIP OR RECOVERY

If **Save** shows an error, keep it visible. Correct the stated issue before trying **Save** again.

Check The Welcome Email

- | | |
|----|---|
| 25 | Open the inbox used in <i>Priya Sharma</i> 's Contact Email field. |
| 26 | Look for the subject Welcome to your course . Check Spam or Junk if it is absent. |
| 27 | Open the message. Confirm it names <i>Cyber Security Intro</i> . |
| 28 | Confirm the start date matches the date you entered on that Course . |

YOU SHOULD SEE

Priya's test inbox contains the **Course** welcome message.

TIP OR RECOVERY

If the **email** is missing, continue with the Task and **Course** checks before using the recovery topic.

Check The Follow-Up Task

- | | |
|----|--|
| 29 | In admin Sales , click App Launcher . Search Tasks and click the Tasks item. |
| 30 | Open the Tasks list-view arrow. Select All Open Tasks. |
| 31 | Click the newest <i>Call new student</i> task. Use the list search if needed. |
| 32 | Check Name = <i>Priya Sharma</i> and Related To = <i>Cyber Security Intro</i> . |

YOU SHOULD SEE

The Task links the correct **student** and **Course**.

- | | |
|----|---|
| 33 | Check Assigned To . It should be your System Admin user, who created this test Enrollment . |
| 34 | Confirm the subject is <i>Call new student</i> . No due date is expected in the core lab. |

- 35** Click the *Cyber Security Intro* link in **Related To**. Click **Details** on the **Course**.
- 36** Confirm **Status** = Live, **Total Enrollments** = 1 and **Total Revenue** = 10000.

YOU SHOULD SEE

The task and **Course** update both worked.

Check The New Course Access

- 37** Switch to *Trainer One*'s browser. Click **Sales**, then **Courses**.
- 38** Open the list-view arrow and select All **Courses**. Reload the page.
- 39** Wait for sharing to update. Find and click *Cyber Security Intro*.
- 40** Click **Details**. Confirm **Status** = Live and that **Fee** is visible but read-only.

YOU SHOULD SEE

Trainer One can now access the **new Live Course**.

TIP OR RECOVERY

The **Course** became Live through Flow; the Live sharing rule then granted Trainer access.

DAY 4, TOPIC 8: Recover from Flow or email problems

Use the visible error or missing output to identify the correct recovery path.

WORKSPACE: SYSTEM ADMIN • ONLY IF NEEDED

If The Enrollment Does Not Save

- 01 If the test succeeded, skip this recovery topic and go to Day 5.
- 02 If **Save** shows a Flow error, keep the message open and show your trainer. Do not keep clicking **Save**.
- 03 In admin **Setup**, search Flows and open **Enrollment Welcome**. Check which element the error identifies.
- 04 Review the values on that element against the matching guide instructions before changing it.

YOU SHOULD SEE

You have identified the failed element without adding duplicate test records.

TIP OR RECOVERY

A failed transaction can roll back the **Enrollment** and its Flow changes.

- 05 After correcting the element, click **Save As** if the active version cannot be overwritten.
- 06 Choose A **New Version**, keeping **Flow Label** = **Enrollment Welcome**. Click **Save**.
- 07 Click **Activate** for the corrected version and confirm if asked.
- 08 Return to the unsaved **Enrollment**, confirm **Course**, **Student** and **Amount Paid**, then click **Save** once.

YOU SHOULD SEE

The corrected active Flow can process the **Enrollment**.

TIP OR RECOVERY

If an **Enrollment** already saved, do not recreate it blindly. Ask the trainer before adding another test record.

If Only The Email Is Missing

- | | |
|----|--|
| 09 | Confirm the Task exists and the Course is Live. Check the test inbox and Spam again. |
| 10 | Open Priya's Contact Details and verify the Email address. |
| 11 | In Flow Builder, open <i>Welcome Student</i> . Confirm the recipient uses Student → Email and Sender Type = <i>Current User</i> . |
| 12 | Ask your trainer to check sender verification, domain verification, Deliverability and email limits. |

YOU SHOULD SEE

You have separated **email**-delivery checks from Task and **Course** checks.

TIP OR RECOVERY

If a Flow correction is needed, **save** a **new** version and **activate** it. A **new** test **Enrollment** changes later totals.

DAY 5: REPORT AND DEMONSTRATE

Starting point: Your working app, active Flow and test data from Day 4.

Goal: Show enrollment counts and revenue, then demonstrate the app.

Finish with: Three reports, a two-chart dashboard and a three-minute demo.

WHAT WE ARE COVERING

Report type The objects, relationships and fields that a report is allowed to use.	Report A saved view of Salesforce data with selected columns, filters and groupings.
Summary report A report that groups rows and can show subtotals.	Matrix report A report grouped by both rows and columns.
Dashboard A page of visual components that use saved reports as their data sources.	Widget or component One dashboard chart or table built from a source report.

TOPICS IN THIS DAY

01 Verify the data and open the Enrollment report Confirm the exercise totals and select the correct report type.	02 Create the report type if it is missing Recovery topic: create Courses with Enrollments only when the report type is absent.
03 Build and save the All Enrollments report Create the detailed four-row Enrollment report used as the reporting base.	04 Create the summary report and date filter Group payments by Course, calculate totals and retain a Last 30 Days filter.
05 Create the matrix report Create a separate report grouped by Course rows and Enrollment month columns.	06 Build the dashboard and both charts Add the revenue bar chart and Enrollment-count donut to one dashboard.
07 Correct report or dashboard totals Recovery topic: check the source report, filters and underlying records.	08 Prepare and deliver the demonstration Prepare the browser tabs and present the working solution in three minutes.

DAY 5, TOPIC 1: Verify the data and open the Enrollment report

Confirm the exercise totals and select the correct report type.

WORKSPACE: SYSTEM ADMIN • SALES • SYSTEM ADMIN • REPORTS

Check The Reporting Data

- 01 Sign in as System Admin. Open **Sales**, click **Courses** and select All **Courses**.
- 02 Click **Salesforce Admin Fundamentals**. Click **Details** and reload the page.
- 03 Confirm **Total Enrollments** = 3 and **Total Revenue** = 45000.
- 04 Click **Related**. Open each ENR number in **Enrollments** and check that its **Student** is Priya, Rahul or Neha.

YOU SHOULD SEE

The admin **course** has three **enrollments** totaling 45,000.

- 05 Click **Courses**, then **Cyber Security Intro**. Click **Details** and reload the page.
- 06 Confirm **Total Enrollments** = 1 and **Total Revenue** = 10000.
- 07 Open **Data Analytics 101**. Confirm its roll-up totals are both 0.
- 08 If you added extra tests or see different totals, review those records with your trainer now.

YOU SHOULD SEE

The core dataset contains four **Enrollments** and 55,000 in payments.

TIP OR RECOVERY

Do not delete extra records just to force these totals. First confirm which records belong to the exercise.

Choose The Enrollment Report

- 09 Click **App Launcher**, the nine-dot icon.
- 10 Click its search box and enter **Reports**. Click the **Reports** item.
- 11 Click **New Report** at the top right.

- 12** In the report type picker, choose All if categories restrict the results. Search **Enrollments**.

YOU SHOULD SEE

The report type picker shows matching **Enrollment** report types.

- 13** Click ***Courses with Enrollments***. Do not choose Activities with **Enrollments**.

- 14** Click Start Report or Continue at the bottom right.

- 15** Wait for the report builder. Confirm its report type is ***Courses with Enrollments***.

- 16** If the builder opened, skip the **next** recovery task and go to “Add the report columns” [Day 5, Topic 3: Build and **save** the ***All Enrollments*** report].

YOU SHOULD SEE

The report builder is open with **fields** from **Courses** and **Enrollments**.

TIP OR RECOVERY

If ***Courses with Enrollments*** is missing, use the following recovery task with your trainer.

DAY 5, TOPIC 2: Create the report type if it is missing

Recovery topic: create Courses with Enrollments only when the report type is absent.

WORKSPACE: SYSTEM ADMIN • ONLY IF NEEDED

Create A Missing Report Type

- 01 Use this recovery subsection only if **Courses with Enrollments** was missing. Otherwise go to “Add the report columns” [Day 5, Topic 3: Build and **save** the **All Enrollments** report].
- 02 Close the report picker using Cancel or X. Click the gear icon and click **Setup**.
- 03 In Quick Find, enter *Report Types*. Click Report Types in the results.
- 04 Click Continue if an introduction appears. Click **New** Custom Report Type.

YOU SHOULD SEE

The custom report type wizard opens.

- 05 Open Primary Object and select **Courses**.
- 06 Click Report Type Label and enter **Courses with Enrollments**. Keep the generated Report Type **Name**.
- 07 Click **Description** and enter **Course** records with their **student enrollments**.
- 08 Open Store in Category and select *Other Reports*, or a category your trainer provides.

YOU SHOULD SEE

The report type’s name, primary object, **description** and category are filled.

- 09 Under Deployment **Status**, select *Deployed*.
- 10 Click **Next**. On the relationship diagram, click Click to relate another object.
- 11 Choose **Enrollments** as the **related** object.
- 12 Select Each A record must have at least one **related** B record. Click **Save**.

YOU SHOULD SEE

The *deployed* type includes **Courses** that have **Enrollment** records.

- 13** On the report type detail page, click **Edit** Layout in **Fields** Available for **Reports**.
- 14** Check for **Course Name**, **Enrollment Number**, **Student**, **Amount Paid** and **Enrollment Created Date**.
- 15** If one is in the field palette but not the layout, drag it from the palette into the appropriate layout section.
- 16** Click **Save**. If a required field is not available, show your trainer before continuing.

YOU SHOULD SEE

The required **Course** and **Enrollment fields** are available to report builders.

- 17** Click **App Launcher**. Search **Reports** and click **Reports**.
- 18** Click **New Report**. Search **Courses with Enrollments** in the report type picker.
- 19** Select the report type. Click Start Report or Continue.
- 20** Wait for the report builder. Continue with the **next** task, "Add the report columns" [Day 5, Topic 3: Build and **save** the **All Enrollments** report].

YOU SHOULD SEE

The report builder is open with the correct report type.

DAY 5, TOPIC 3: Build and save the All Enrollments report

Create the detailed four-row Enrollment report used as the reporting base.

WORKSPACE: SYSTEM ADMIN • REPORT BUILDER • SYSTEM ADMIN • REPORTS

Add The Report Columns

- 01 Click Outline in the left panel. Find the Columns section.
- 02 Keep **Enrollment Number** if it is already listed. If absent, click Add column, search it and select it.
- 03 Click Add column again. Search **Course Name** and select the **Course Name** field from **Course**.
- 04 Click Add column. Search **Student** and select the **Student** field from **Enrollment**.

YOU SHOULD SEE

The report columns include the **Enrollment number**, **Course** and **Student**.

- 05 Click Add column. Search **Amount Paid** and select the **Enrollment Amount Paid** field.
- 06 Click Add column. Search Created Date and choose the field belonging to **Enrollment**.
- 07 If two Created Date **fields** appear, inspect the object grouping or hover label; select the **Enrollment** one.
- 08 Review the five required columns. Keep other default columns unless your trainer asks you to remove them.

YOU SHOULD SEE

Columns include **Enrollment Number**, **Course Name**, **Student**, **Amount Paid** and **Enrollment Created Date**.

TIP OR RECOVERY

Do not substitute **Course** Created Date; we will filter and group by when each **Enrollment** was created.

Show All Exercise Records

- 09 Click Filters in the left panel. Click the Show Me filter.
- 10 Choose the all-records option, such as All **Courses**. Click Apply.
- 11 Click the date filter. Set Date Field to the **Enrollment Created Date** field.
- 12 Set Range to *All Time*. Click Apply.

YOU SHOULD SEE

The initial report filters include all accessible records across all dates.

- 13 Check for extra filters below the standard filters. Remove an unintended custom filter with its X.
- 14 Click **Run** at the top right. Wait for the full report results.
- 15 Check that there are four **Enrollment** records in the core dataset.
- 16 If fewer rows appear, check the date and Show Me filters before changing or recreating records.

YOU SHOULD SEE

The full report shows the four core **Enrollments**.

TIP OR RECOVERY

Preview may display a sample. **Run** the report to check the full results.

Save All Enrollments

- 17 If viewing results, click **Edit** to return to the builder. Click **Save & Run** at the top right.
- 18 In **Save Report**, click Report Name and enter **All Enrollments**.
- 19 Leave the generated Report Unique Name unchanged. Click Select Folder if a folder chooser is shown.
- 20 Choose *Private Reports* for this practice exercise, or a folder named by your trainer. Click Select Folder.

YOU SHOULD SEE

The report name and an available **save** folder are selected.

- 21 Click **Save** in the **Save** Report window. Wait for the saved report to **run**.
- 22 Confirm the title is ***All Enrollments***.
- 23 Check that the list includes Priya twice, Rahul once and Neha once across their **Course enrollments**.
- 24 Confirm **Amount Paid** values are *15000, 15000, 15000* and *10000*.

YOU SHOULD SEE

All Enrollments is saved with four rows totaling 55,000 in payments.

TIP OR RECOVERY

Data Analytics 101 is absent because this report type includes only ***Courses with Enrollments***.

DAY 5, TOPIC 4: Create the summary report and date filter

Group payments by Course, calculate totals and retain a Last 30 Days filter.

WORKSPACE: SYSTEM ADMIN • ALL ENROLLMENTS REPORT • SYSTEM ADMIN • ENROLLMENTS BY COURSE

Group Payments By Course

- 01 If the report is closed, open **Reports**. Click **All Enrollments** in Recent or your saved report folder.
- 02 Click **Edit** at the top right. Click Outline in the left panel.
- 03 In Groups, click Add group under Group Rows. Search **Course Name**.
- 04 Select the **Course Name** field. Wait for the preview to group the records.

YOU SHOULD SEE

The report has a **Course Name** row grouping.

- 05 Find the **Amount Paid** column header in the preview. Click its small drop-down arrow.
- 06 Click Summarize. Select Sum.
- 07 Click Apply if the menu shows it. Confirm a *Sum of Amount Paid* subtotal is available.
- 08 Open the arrow beside **Save** at the top right and click **Save As**.

YOU SHOULD SEE

The report is grouped by **Course** and sums **Amount Paid**.

TIP OR RECOVERY

Use **Save As** to preserve **All Enrollments** as the original flat list.

- 09 In **Save Report As**, enter Report Name = **Enrollments by Course**.
- 10 Leave the generated unique name unchanged. Select the same practice report folder.
- 11 Click **Save**. Click **Run** if you remain in the builder.

- 12** Check **Course** totals of 45000 and 10000, and Grand Total = 55000.

YOU SHOULD SEE

Enrollments by Course is saved as a summary report.

Filter Recent Enrollments

- 13** Open *Enrollments by Course* if it is closed. Click **Edit**.
- 14** Click Filters in the left panel. Click the existing date filter.
- 15** Confirm Date Field is **Enrollment Created Date**.
- 16** Open Range and select *Last 30 Days*, or choose a relative range and enter *LAST 30 DAYS*.

YOU SHOULD SEE

The date filter uses the **Enrollment** date and a last-30-days range.

- 17** Click Apply in the date filter panel. Click **Run**.
- 18** Read the total *record count*. Recent class records should still be included.
- 19** Click **Edit**, then Filters, then the date filter again.
- 20** Select a shorter range, such as Today. Click Apply, then **Run**.

YOU SHOULD SEE

The report includes only records within the selected date range.

TIP OR RECOVERY

The count can stay the same if all four records were created today.

- 21** Click **Edit**. Click Filters, then the date filter.
- 22** Set the range back to *Last 30 Days*. Click Apply.
- 23** Click **Save & Run**. If a **save** confirmation appears, confirm the existing report.
- 24** Check that the report title remains *Enrollments by Course*.

YOU SHOULD SEE

The saved summary report uses the *Last 30 Days* filter.

DAY 5, TOPIC 5: Create the matrix report

Create a separate report grouped by Course rows and Enrollment month columns.

WORKSPACE: SYSTEM ADMIN • ENROLLMENTS BY COURSE

Group By Course And Month

01	Open <i>Enrollments by Course</i> . Click Edit .
02	Open the arrow beside Save and click Save As .
03	Enter Report Name = <i>Enrollments by Course and Month</i> . Select the same practice report folder.
04	Click Save . If you are viewing results, click Edit again.
YOU SHOULD SEE You are editing a separate copy for the matrix report.	
05	Click Outline. Keep Course Name in Group Rows.
06	Under Group Columns, click Add group. Search Created Date.
07	Select the Created Date field from Enrollment .
08	Open the drop-down on that date grouping. Choose Group Date By, then <i>Calendar Month</i> .
YOU SHOULD SEE The matrix has Course rows and Enrollment month columns.	
09	Check that Amount Paid is still summarized by Sum. If needed, open its column menu and select Summarize → Sum.
10	Click Save & Run .
11	Read the Course totals across the month columns. Confirm Grand Total = 55000 for the core dataset.
12	Check the report title is <i>Enrollments by Course and Month</i> .

YOU SHOULD SEE

Your matrix report is saved.

TIP OR RECOVERY

One month column is expected when all practice **Enrollments** were created in the same month.

DAY 5, TOPIC 6: Build the dashboard and both charts

Add the revenue bar chart and Enrollment-count donut to one dashboard.

WORKSPACE: SYSTEM ADMIN • DASHBOARDS • SYSTEM ADMIN • DASHBOARD EDITOR

Create The Dashboard

- 01 Click **App Launcher**. Search **Dashboards** and click the **Dashboards** item.
- 02 Click **New Dashboard** at the top right.
- 03 Click Name and enter ***Enrollments Dashboard***.
- 04 Choose Select Folder. Select *Private Dashboards*, or a folder your trainer provides, then confirm the folder.

YOU SHOULD SEE

The dashboard name and an available folder are selected.

- 05 Click **Create**. Wait for the dashboard editor.
- 06 Click + Widget, then Chart or Table. In older interfaces, click + Component.
- 07 Search for ***Enrollments by Course*** in the report picker.
- 08 Select ***Enrollments by Course*** and click Select.

YOU SHOULD SEE

The chart settings open using the summary report.

TIP OR RECOVERY

Use ***Enrollments by Course***, not ***All Enrollments*** or the matrix report.

Add The Revenue Chart

- 09 In the chart types, click the *Vertical Bar* chart icon.
- 10 Open X-Axis or the category field and select **Course Name**.
- 11 Open Y-Axis or the measure field and select *Sum of Amount Paid*.
- 12 Click Title and enter ***Revenue by Course***.

YOU SHOULD SEE

The chart compares **Course** names using their summed payments.

- 13** Click Add at the bottom of the chart settings.
- 14** Check that the chart appears on the dashboard canvas.
- 15** Check for bars representing 45000 and 10000 in the core dataset.
- 16** Keep the dashboard editor open to add the second chart.

YOU SHOULD SEE

The revenue bar chart is on the dashboard.

TIP OR RECOVERY

Choose *Sum of Amount Paid*, not **Fee**. **Fee** is the **Course** price; **Amount Paid** is the recorded payment.

Add The Enrollment Chart

- 17** Click + Widget, then Chart or Table, or + Component in the older interface.
- 18** Search **Enrollments by Course**. Select that same summary report and click Select.
- 19** Click the Donut chart icon.
- 20** Open the grouping field and select **Course Name**.

YOU SHOULD SEE

The donut groups **Enrollment** records by **Course**.

- 21** Open the measure or value field and select *Record Count*.
- 22** Click Title and enter **Enrollments by Course**.
- 23** Click Add. Drag the second chart beside or below the first using its header.
- 24** Click **Save** at the top right.

YOU SHOULD SEE

The dashboard contains a revenue chart and an **enrollment**-count chart.

25	Click Done to leave the dashboard editor.
26	Click Refresh on the dashboard. Wait for the refresh to finish.
27	Check the revenue chart: <i>Salesforce Admin Fundamentals = 45000; Cyber Security Intro = 10000.</i>
28	Check the donut: <i>Salesforce Admin Fundamentals = 3; Cyber Security Intro = 1.</i>

YOU SHOULD SEE

The two dashboard charts show the expected payments and **enrollment** counts.

TIP OR RECOVERY

If labels are shortened, hover over a bar or donut segment to read its **Course name** and value.

DAY 5, TOPIC 7: Correct report or dashboard totals

Recovery topic: check the source report, filters and underlying records.

WORKSPACE: SYSTEM ADMIN • ONLY IF NEEDED

If The Report Totals Differ

- 01** If the charts match, skip this recovery subsection and go to “Prepare your demonstration” [Day 5, Topic 8: Prepare and deliver the demonstration].
- 02** On the dashboard, click **Refresh**. Confirm each chart uses **Enrollments by Course** as its source report.
- 03** Open that report and click **Run**. Check its date filter, Show Me filter, **Course** grouping and payment sum.
- 04** If the report differs too, open the **Course Enrollments related** lists and review extra or missing records with your trainer.

YOU SHOULD SEE

You have checked the dashboard source, report filters and underlying records.

TIP OR RECOVERY

Do not change a chart value manually. The charts must reflect the saved **Enrollment** records.

DAY 5, TOPIC 8: Prepare and deliver the demonstration

Prepare the browser tabs and present the working solution in three minutes.

WORKSPACE: SYSTEM ADMIN AND TRAINER ONE • YOUR THREE-MINUTE DEMONSTRATION

Prepare Your Demonstration

- 01** As admin, open **Sales**, then **Courses**, then *Salesforce Admin Fundamentals*. Click **Details**.
- 02** Check the custom **fields** and totals. Click **Related** so you can show its **Enrollments**.
- 03** As *Trainer One*, open the same **Course**. Confirm **Fee** is visible and cannot be edited.
- 04** Open the Trainer record action menu and confirm Delete is unavailable.

YOU SHOULD SEE

Your **Course** model and permission examples are ready to show.

- 05** As admin, open **Setup**. Search Flows and open *Enrollment Welcome*. Confirm the active version.
- 06** Keep the welcome **email** and *Call new student* task available in browser tabs.
- 07** Open **Dashboards** and click *Enrollments Dashboard*. Click **Refresh**.
- 08** Ask a classmate to watch while you practice the four demonstration points on the **next** step.

YOU SHOULD SEE

Your Flow, **email**, task and dashboard are ready for the demonstration.

TIP OR RECOVERY

If every **Course** is now Live, explain the earlier *Planned*-versus-Live access test from Day 3.

Demonstrate Your Solution

- 09** For one minute, show a **Course**, its **fields**, its **Enrollments** and the two calculated totals.

10	For 30 seconds, switch to <i>Trainer One</i> . Show the visible read-only Fee and explain the missing Delete action.
11	For 30 seconds, show the active Flow, welcome email , creator-assigned task and Live Course status .
12	For one minute, show the dashboard. Explain the revenue bars and the enrollment -count donut.

YOU SHOULD SEE

You can demonstrate how the coaching centre solution works from records to reporting.
